

audiodevel Development Services

audiodevel focuses on the development of digital audio devices of all kinds. Besides working on our own products, we offer development services and free of charge consulting.

We are registered in Hamburg, Germany, but rooted as well in Portugal, where we join forces with our long-standing network of highly qualified professionals.

Our Primary Field is the development of turnkey solutions of embedded real-time systems and mixed signal hardware, especially (but not only) for audio devices.

We are used to hardware level programming and to building bare-bone systems from scratch, but we employ as well freeRTOS or embedded Linux. Our turnkey offer includes not only electronics, we also provide housing design, mechanical engineering, prototyping and small series.

More, as support products for our hardware, we develop cross-platform software based on Qt or wxWidgets.

Our Offer includes

- Free of charge consulting
- Development of mixed signal real-time embedded or bare-bone hardware & firmware
- Cross-platform development for Windows, OS X, iOS, (embedded) Linux and Android, using Qt or wxWidgets.
- All source code is written in C, C++ and/or Assembler
- Design of complex and noise-critical PCB-Layouts
- Prototyping and small series
- 3D design and mechanical engineering (customized housings, robotics)
- Support for industrializing and mass-production
- Feasibility studies

Our Network includes

- Electronic engineers
- Soft- and firmware developers
- Local facilities for high quality prototyping and small series production
- Robotic experts
- Industrial designers
- Mechanical and aeronautic engineers

All our co-workers are fluent in English, spoken and written. Individual CVs and/or references can be forwarded on request. The CV of our CTO Michael can be found [here](#).

For any questions, please feel free to get in contact with Michael.
